AMENDMENTS TO THE SPECIFICATION

Please amend the specification as follows:

Please replace the paragraph beginning at page 9 line 17 with the following amended paragraph:

In a related embodiment, a perforated film without a distinct web or scrim might be provided, as shown in Fig. 7. In the tooth whitening product 620, a single or multilayer film might be provided comprising a water hydratable polymer, a tooth whitening agent, and a plasticizer. The film can be perforated after it has dried or cured. The void spaces, holes, or apertures 630 636 that are formed during the perforation process can pass completely through the thickness of the film or might only partially penetrate the film thickness. The void spaces 636 can have the same dimensions as previously described with respect the void spaces of the web. The void spaces 636 can be provided in a random or repeating pattern and vary in size and shape as previously described. Further, this embodiment can include a coating of a tooth whitening agent as previously described or other features of the embodiments discussed above.
